

Differential Expression Analysis

Volcano plot showing differentially expressed genes. The x-axis represents Log2 Fold Change, and the y-axis represents $-\log_{10}$ Adjusted P-value. Blue dots indicate downregulated genes (Log2 Fold Change < -1), and red dots indicate upregulated genes (Log2 Fold Change > 1). Vertical dashed lines are at Log2 Fold Change = -1 and 1. A horizontal dashed line is at $-\log_{10}$ Adjusted P-value = 1.3.
